

INCUBATOR

Do you have a concept of an innovative product? Would you like to get in on the market, but don't have enough experience, equipment and the financial resources to accomplish it? Are you working in the field of healthcare or pharmacy? If so, our services are exactly for you.

The transformation of novel medical products or medical devices from laboratory to clinical practice is a lengthy and expensive process requiring a lot of human and financial resources. Particularly for concepts invented by small research teams and companies, these barriers may slow down or even terminate the process. Forming a business partnership with a knowledgeable and experienced investor is sometimes the only option.

The Contipro's Product Incubator provides the perfect solution to these challenges. We are aware of all the problems which may arise during the development of an innovative product and we have the knowledge and financial resources to solve them together with our clients. You can benefit from a partnership with an established company which has been in the market of active substances and medical devices for more than 20 years. Contipro has a vast experience with successful development, registration and marketing of products for both human and veterinary medicine. All these activities are under one roof, which saves time and costs.

In the Product Incubator, Contipro acts as a non-financial investor. Instead of investing money, it provides its equipment, material, workspace, experienced staff and all the services which are necessary to transform the innovative concept into a new, successful product that will comply with legislation and will have a designated sales channel.

METHODS OF COOPERATION

There are three basic ways of cooperation and final settlement:

- 1) The inventor requires only finalizing the product development including all the activities that are necessary for its production in accordance with applicable legislation and placing it on the market. Production and sales will be then ensured by the inventor and the Incubator will be returned its investment plus agreed profit.
- 2) The inventor requires finalizing the product development and creating production capacity in accordance with the legislation. Sales will be ensured by the inventor themselves and Incubator will be returned its investment plus agreed profit.
- 3) The Incubator will complete the product development, create sufficient production capacity and the product will be sold by Contipro by using its established channels. The inventor will be paid an agreed proportion of the profit.

SERVICES WE CAN PROVIDE

- Finalizing research and experimental development
- Development and validation of analytical methods
- Pilot production and production of samples for (pre)clinical testing according to GMP
- Planning, administration and evaluation of (pre)clinical testing
- Preparation of manufacturing documentation and final product specification
- Production of active ingredients, medical devices and veterinary medicines in accordance with legislation
- Development of quality control and a quality assurance system
- Process validation and qualification
- Development of technical documentation
- Certification and registration of new products on chosen markets
- Placing a product on the market in the Czech Republic and abroad using the existing distribution network in more than 50 countries and 6 continents
- Marketing support

WHO IS THE IDEAL CLIENT?

We want to help and support scientists and researchers, universities, spin-offs, start-ups and SMEs with good ideas or projects. The finished product should be:

- Active pharmaceutical ingredient
- Active cosmetic ingredient
- Medicinal product for human or veterinary market
- Medical device for human or veterinary market
- Nutritional supplement for human or veterinary market

The incoming concepts should be at least at TLR3 (Experimental Proof of Concept). Due to the better territorial targeting of prospective patents, technologies protected by secret know-how and patent applications which can be extended to other countries are preferred.

ACHIEVEMENTS OF THE INCUBATOR

In cooperation with our partners, we have developed a range of active cosmetic ingredients, cosmetic products based on nanofibers, medical devices etc. Interestingly, this service is mainly used by different partners from abroad.

ABOUT CONTIPRO

Contipro is a Czech-based producer of bioactive compounds for pharmaceutical and cosmetic industries. Our most important product is hyaluronic acid and derived products. We have been involved in its research, development and its biotechnological for more than 20 years.

- 3950 m² of fully equipped laboratories
- 18 research teams with highly educated professionals
- Pilot plant with clean rooms of different classes
- Fully equipped analytical laboratories
- Production areas complying with GMP
- Office, conference and storage rooms
- ISO 9001:2008
- ISO 22716:2007
- ISO 13485:2003
- GMP for active substances and veterinary medical products
